PRIORITY APPLN. INFO.:

AB High resolution reversal images are produced by using an electrostatog. imaging system which utilizes a polar liq. developer. The polar liq. is transferred by the proper use of potential differences from the carrier roller to the uncharged areas of the image surface. The toner image receptor surface is discharged promptly by an overall exposure upon development, preventing developer migration and image resolution loss.

IT C.I. **Basic Violet 1**, tannate

RL: USES (Uses)

(electrophotog. polar liq. developers contg., for reversal development)

IT **12634-25-2** 52219-10-0
